

SUPERIOR PLUS PAINTING & REMODELING

WordPress Website Editor Guide

A detailed handbook for changing text and images, managing cards, deleting content safely, restoring original pages, and understanding every field in the Superior Plus Content plugin.

Website

sppaintingremodeling.com.au

Prepared

5 August 2026

Required versions

Plugin 2.5.9 · Theme 3.4.10

Editing principle

Change content; keep design locked

What this guide covers

- | | |
|---|--------------------------------------|
| 1. Before editing | 12. Additional Services |
| 2. The safe editing workflow | 13. About |
| 3. Blank fields and original defaults | 14. Our Process |
| 4. Changing, hiding and restoring content | 15. FAQs and reviews |
| 5. Adding, removing and reordering cards | 16. Contact and quote forms |
| 6. Images and galleries | 17. Service Areas and suburb pages |
| 7. Site Settings field dictionary | 18. Gallery and projects |
| 8. Shared page field dictionary | 19. Blog articles |
| 9. Homepage | 20. Navigation |
| 10. Services directory | 21. Static and design-locked content |
| 11. Individual service pages | 22. Troubleshooting checklist |

Core protection: with plugin 2.5.9, saving one field no longer converts other untouched empty controls into deletions. Untouched fields continue using their original content.

Do not use the normal WordPress page body, Elementor, or theme-file editor for these pages. The React templates use the Superior Plus fields described in this guide.

Before editing anything

- ☐ Confirm **Superior Plus Content 2.5.9** is active under Plugins.
- ☐ Confirm **Superior Plus theme 3.4.10** is active under Appearance → Themes.
- ☐ Clear WordPress, hosting/CDN and browser caches after installing an update.
- ☐ Download a JSON safety copy from the Superior Plus recovery/backup screen.
- ☐ Edit one page and preview it before performing a large batch of changes.

Where content is managed

Dashboard area	What it controls
Pages	Homepage, About, Services directory, Process, FAQs, Contact, Areas, Gallery and other page-level sections.
Superior Plus → Services	Individual service titles, descriptions, scope/process/benefit cards, galleries and related services.
Superior Plus → Testimonials	Managed Google/client review records used by selectable testimonial components.
Superior Plus → FAQs	Individual FAQ question and answer records.
Superior Plus → Projects	Project title/type, featured image, gallery and related pages.
Superior Plus → Articles	Blog article title, body, image, metadata and related services.
Superior Plus → Site Settings	Business details, global CTA, trust strip, counters, review profile, footer and form delivery settings.

How to change one field safely

- 1 Open the correct Page, Service, Article, Project, Testimonial or FAQ record.
- 2 Locate **Superior Plus editable content**. Do not edit unrelated controls.
- 3 Change only the required field. For a card, edit the corresponding row/item rather than replacing the entire section.
- 4 Click **Update**, open the public page in a private window, and verify desktop and mobile presentation.
- 5 If live content looks unchanged, purge caches. Do not repeatedly restore or re-import.

Blank fields: the rule

Situation	Result
Field is blank in the plugin, original content is visible, and you leave it untouched	The original content remains visible. Plugin 2.5.9 ignores that untouched empty control.
Field contains saved content and you replace it	Only that content changes.
Field contains saved content and you clear it	It is treated as an intentional removal and stays hidden.
Field starts blank but shows original content, and you want to hide the original	Enter TEMP, Update, reopen, delete TEMP, and Update again. A space does not count because spaces are trimmed.
Page was damaged before plugin 2.5.9	Use Restore this item once, then edit normally.

Removing content without damaging the page

Delete text

1. If the field already contains text, clear it and Update.
2. If the field is blank but original text is visible, use the TEMP two-save method described above.
3. Verify that only the intended heading, paragraph or CTA disappeared.

Remove a repeatable card

1. Open the repeatable list/card field.
2. Use its Remove/Delete control on the exact row.
3. Do not blank every row unless the entire section should be empty.
4. Update and verify card count and order.

Restore original content

Restore this item affects only the open record. It republishes that page/item, deletes its managed customisations, and rebuilds its bundled original content. It does not reset the whole site or Site Settings.

1. Open the damaged item.
2. Find **Restore this item**.
3. Use it only after confirming the correct page/service is open.
4. After restoration, edit only the required field and Update.

Never do this

- Do not run a full approved-site import merely to repair one page.
- Do not delete core pages and recreate them manually.
- Do not edit generated files under `react-dist`.
- Do not alter URLs/slugs casually; navigation and routing depend on them.

Adding and organising cards

Control type	How to use it
List — one per line	Each line becomes one card/item. Add a line to add a card; remove a line to delete it.
Heading Description	Each repeatable row has a heading and body. Both belong to the same card.
Relationship selector	Select existing Services, Projects, Testimonials, Articles or Pages. Create/edit the source record separately.
Gallery	Add Media Library items, replace them, remove them, reorder them, edit captions/alt text, and set crop position where available.

Images

- Use clear WebP/JPEG images with consistent orientation.
- Write useful alt text describing the actual project or location.
- Use Replace to retain the card position while changing its image.
- Removing every image from a configured gallery intentionally empties that gallery.
- Suburb card images are edited on the individual suburb record, not the Areas overview page.

Colours, icons, spacing, animation and card shape are design-locked. Content editors should change wording, images and selection; theme styling should remain consistent.

Site Settings fields

Plugin field	Live-site effect
Business name	Global business identity and structured information.
Phone number as displayed	Visible telephone number in header/footer/CTA links.
Phone number for links	The digits used by tap-to-call links.
Email address	Public business email shown in contact areas.
Location / Map street address	Public location text and homepage/contact address.
Google Maps URL / embed URL	Map button destination and embedded map.
Google rating / review count / reviews URL	Review summary number, count and “View on Google” link.
Facebook / Instagram URL	Footer social links.
Site logo / Logo accessible name	Global logo and assistive-text label.
Footer introduction and headings	Footer brand copy and column headings.
Footer copyright / closing line	Bottom-of-site legal and closing copy.
Homepage counters — Number Label	Numeric project/statistic cards in the footer/home system.
Homepage review-platform badge image	Trust-platform graphic.
Trust strip	The four global trust statements below page heroes.
Service areas	Global suburb list used by shared area bands.
Default CTA title/text/label/destination	Fallback “Let’s talk colour” section when a page has no custom CTA.
Quote recipient email	Administrator-only form delivery recipient.
Privacy/consent text	Required consent wording on enquiry forms.

Shared fields on managed pages

Plugin field	Live-site effect
Locked page template	Selects the React layout. It is locked on managed pages to prevent layout damage.
Hero eyebrow	Small uppercase line above the main page title.
Hero title	Main H1/page heading.
Hero accent line	Styled secondary line of the hero heading.
Hero introduction	Large introductory paragraph in the hero.
Hero image	Main banner/hero photograph.
Hero image alt text	Accessible description for the hero image.
Closing CTA title/text	Heading and paragraph in the final “Let’s talk colour” band.
Closing CTA button label/destination	Final CTA button wording and URL/path.
SEO title/description	Search result title and description metadata.
Canonical URL	Preferred URL for search engines; normally leave unchanged.
Social sharing image	Image shown when the page is shared on social platforms.

If a page-specific CTA field is untouched/blank, the Site Settings default CTA or the theme’s original page wording is used.

Homepage field dictionary

Field	What it edits
Optional third hero headline line	Extra hero heading line.
Hero trust points	Small trust statements within the homepage hero.
Services eyebrow/title/accent/introduction	Heading block above homepage service cards.
Homepage service cards	Selects which existing Service records appear. Edit card title/summary on the Service record.
Commercial feature title/accent/text/tags/image	Commercial painting feature section.
Selected homepage projects	Selects Project records displayed in the project grid.
Why-us title/accent/introduction	Heading and lead copy above trust cards.
Trust cards — Heading Description	Add, edit, remove and reorder homepage trust cards.
Service-areas title/accent/introduction	Homepage location section heading and copy.
Selected homepage testimonials	Selects managed Testimonial records.
Quote title/accent/text/response label	Homepage “Let’s talk colour” form section.
Quote form fields — Label Placeholder	Visible labels and placeholders in the homepage form.
Blog preview eyebrow/title/accent/introduction	Homepage blog-preview heading.
Selected homepage blog articles	Selects existing Article records.
Projects heading/accent/introduction	Heading above selected project cards.

Partially editable Service/project/blog card colours, icons and layout are fixed; their records and selections are editable.

Services directory and individual services

Services directory page

Core services introduction	Paragraph above the main service directory.
Additional services — Heading Description	Cards under “More ways we can help.”
Professional-service cards	The three “What professional service includes” cards.
Professional-service card images	Images matched by card order.

Individual Service record

WordPress Title	Service record name and, where appropriate, live heading/directory title.
Services-directory summary	Short copy used on service cards.
Scope heading / Scope items	Heading and individual scope cards.
Client PDF sections	Approved narrative sections displayed through the service page.
Process introduction / Process steps	Process lead text and numbered process cards.
Benefits	Benefit cards in the coloured band.
Related services	Selects related-service cards. Their title/summary comes from each selected Service record.
Service gallery	Project media shown on that service page.
Scope/process/benefit/related heading fields	Eyebrows, titles, accents and introductions around those card groups.

Card tones are restored by canonical service type if live metadata is missing. Colours are design-locked and are not content fields.

Additional Services, About and Our Process

Additional Services

Additional services — Heading Description	Add/edit/remove service cards.
Supporting content	Supporting heading/body sections.
Secondary image	Supporting page image.
Related pages	Selects related-page cards.

About

Client-approved sections	Approved heading/body sections.
Approach heading / paragraphs	Main editorial approach section.
Editorial project image / Company archive image	About-page feature images.
Local-roots copy	Local company/background paragraph.
Standards	Titles of About flip cards.
Standard summaries / full descriptions / images	Front summary, flipped back copy and image for each card, matched by order.

Our Process

Client-approved supporting sections	Supporting heading/body content.
Process steps — Heading Description	Main numbered process cards.
Why-it-works points	Flip-card titles.
Summaries / full descriptions / images	Front summary, back copy and image for each proof card, matched by order.

Static The Process “practical work between quote and handover” story cards currently have no individual plugin controls.

FAQ page controls

FAQ introduction	Hero/page introduction.
Displayed FAQs	Selects FAQ records for the accordion.
Before-and-after / project images	FAQ comparison image archive; captions are used as card names.

Create or edit an FAQ

1. Open Superior Plus → FAQs.
2. Edit the WordPress title as the question and body as the answer, or create a new record.
3. Return to the FAQs Page and include it under Displayed FAQs.
4. Update and test the accordion.

Testimonials

Client name / Review label / Project label	Review identity and context.
Star rating / source / URL / date	Review credibility and external link.
Client/project image	Optional review image.
Placeholder review	Placeholder records are excluded from public verified-review areas.

Currently static on the FAQ page: four testimonial archive cards; “Why Clients Choose Us”; “Share Your Experience”; “Request a Free Quote”; and the two plaster-repair comparison cards. Their design is present, but their individual wording is not yet exposed by plugin controls.

Contact page and enquiry forms

What-happens-next steps	Add/edit/remove the three explanatory steps beside the form.
Form service options	Options in the Service required dropdown.
Form property options	Options in the Property type dropdown.
Form fields — Label Placeholder	Visible labels/placeholders; preserve required customer information.
Form note	Message below the submit button.
Site Settings → Quote recipient	Where enquiries are delivered.
Site Settings → Privacy text	Consent checkbox wording.

Do not remove required name, phone, email, suburb or project-detail fields without a corresponding development change. Form validation and email delivery expect them.

Service Areas and suburb pages

Individual suburb record

Suburb / area name	Area name used in the page and directory.
Region group / introduction	Directory grouping and region copy.
Property types	Items in the “Properties we can quote” card and directory summary.
Service slugs	Services relevant to that suburb. Use existing exact service slugs.
Local painting introduction	Suburb-specific introduction.
Nearby area slugs	Neighbouring-area links.
Directory card image	Photo shown on the Areas directory card. This is where Hawthorn East/Camberwell photos are added or replaced.

Add or replace a suburb image

1. Open Superior Plus → Areas and choose the suburb record.
2. Find **Directory card image**.
3. Select/Add Media, choose a suitable project photo, and add alt text.
4. Update, then check both the Areas directory and suburb page.

Static Areas overview region-story cards, service-highlight cards and “Why choose Superior Plus” panel; individual suburb three-step local process cards.

Projects, gallery and articles

Project records

WordPress Title	Project/card title.
Project type	Category/type label.
Featured project image	Main project card image.
Image crop position	Controls which portion remains visible in the card.
Project gallery	Ordered media collection.
Related pages	Related-page selections.

Gallery page

The shared Content sections, Secondary image and Related pages controls manage supplementary gallery-page content. Project collections themselves come from Project records.

Blog article records

Title/body/excerpt/featured image	Main article content and cards.
Article category / eyebrow / read time	Article metadata displayed around the title/card.
Source label / SEO keywords / brief topics	Editorial and search metadata.
Key takeaways	Article takeaway list.
Official references — Label URL	Reference links.
Related services	Service cards shown after the article.

Menus, links and the Home page

Navigation is managed through the WordPress menu assigned by the theme. Page content edits should not reorder the menu.

1. Open Appearance → Menus (or Appearance → Editor → Navigation, depending on WordPress).
2. Edit the theme's assigned primary menu only.
3. Home must point to the real homepage, normally /, not a duplicated URL ending in -2.
4. Our Process must point to /our-process/.
5. Keep Services children beneath Services if the dropdown is required.
6. Save and test desktop plus mobile navigation.

Do not create a second "Home" page to repair a menu link. Confirm Settings → Reading uses the intended static homepage and then select that existing page in the menu.

What can and cannot be added

Section	Status
Service scope/process/benefit cards	Add/edit/remove/reorder
Service gallery	Full media control
Services professional/additional cards	Text/images editable Style locked
About standards flip cards	Add/edit/remove/reorder
Process steps and proof flip cards	Add/edit/remove/reorder
Homepage trust cards and record selections	Editable
FAQ accordion questions	Create records and select
FAQ approved follow-up/testimonial cards	No individual controls yet
Area/suburb directory cards	Content/image editable Style locked
Areas overview marketing cards	No individual controls yet
Related-service cards	Select records; edit source Service
Blog/project/testimonial cards	Edit source record; style locked

Best practice is to expose meaningful wording and images while keeping colour, spacing, icons, animation and layout locked.

If something disappears or looks wrong

Section disappeared after editing

1. Confirm plugin 2.5.9 and theme 3.4.10 are active.
2. Clear all caches.
3. If the page was damaged under an older plugin, use Restore this item once.
4. Edit one field and verify again.

Original content is visible but plugin field is blank

This is normal fallback behaviour. Leave it blank to keep the original. Enter replacement content to override it. Use the two-save TEMP method only when intentionally hiding it.

Card image is missing

- Service card: check the Service hero/featured media.
- Suburb card: check Directory card image on that suburb record.
- Project card: check Featured project image.
- Repeatable gallery card: confirm the Media Library item still exists.

Card colour is white

Update to plugin 2.5.8+ and theme 3.4.9+. Canonical related-service tones are now supplied by both plugin and theme fallback.

Live differs from localhost

- Verify active package versions.
- Purge cache/CDN and hard-refresh.
- Compare the live plugin data with the restored original record.
- Do not assume uploading only the theme is enough; theme and plugin releases work together.

Before finishing an editing session

- ☐ Only the intended wording/images changed.
- ☐ Untouched sections remain visible.
- ☐ All new cards have complete headings and descriptions.
- ☐ Images have useful alt text and acceptable crops.
- ☐ CTA buttons point to valid paths.
- ☐ Desktop and mobile navigation work.
- ☐ Forms still submit and required fields remain present.
- ☐ FAQ accordions open correctly.
- ☐ No page URL gained an unwanted -2 suffix.
- ☐ WordPress/hosting/CDN cache was cleared.
- ☐ A new JSON safety copy was downloaded after major approved changes.

Safe rule to remember: edit content through the field that owns it; edit linked card content on its source record; leave design controls locked; restore only the damaged item.
